

How to use the A-26C Bombsight.

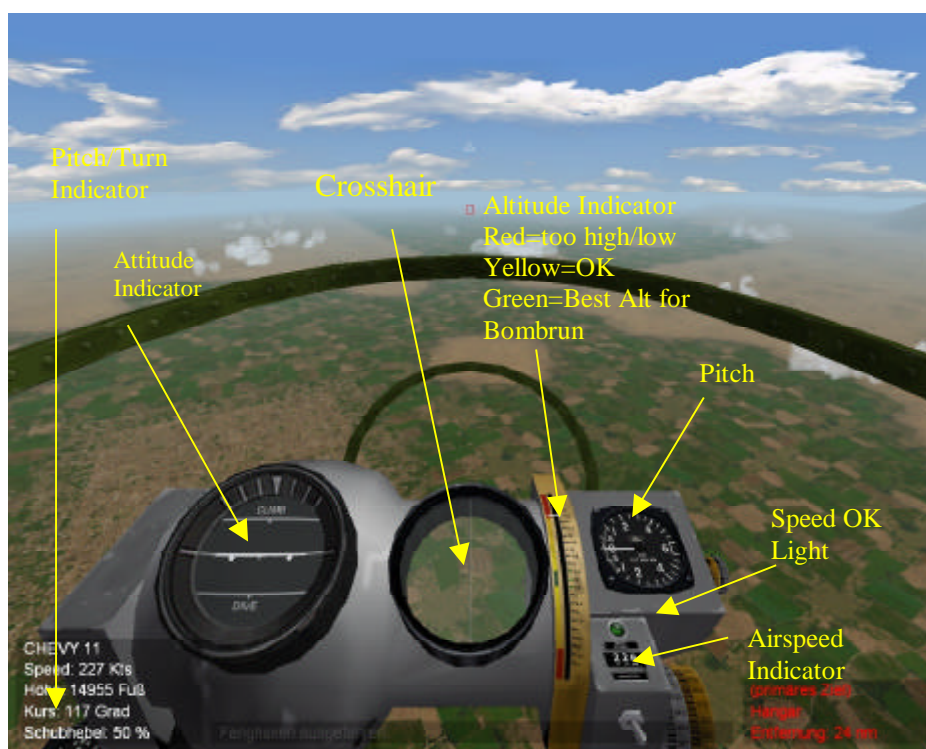

Default view: The Pilot's cockpit

The instruments should be self-explanatory. To prepare for the final bombrun you have to do the following things:

1. Select your bombs
2. Set bomb-ripple to 4+
3. Set ripple-time to 200ms at 4 1000lbs bombs or 100ms at 8 500lbs bombs
4. fly to an altitude between 6000 feet and 14000 feet and a speed between 215MPH and 225MPH (80% thrust)
5. If you have a distance to the target of approx. 6NM....
6. ...use the "Hook Lever" (default "H") Key to switch to bombardiers sight.

The Bombardiers cockpit:

1. To get the right position for bombing – look down to the maximum pitch
2. If you have the right speed the “Speed OK Light” will be illuminated

The final bombrun:

Drop your bombs....

....and with some training you achieve a hit-rate above 90%
